Special Issue

Environmental Tectonics and Climate: The Netherlands Environmental Earth System Dynamics Initiative (NEESDI)

Edited by

S.A.P.L. Cloetingh

Netherlands Research School of Sedimentary Geology, Faculty of Earth Sciences, Vrije Universiteit, De Boelelaan 1085, 1081 HV Amsterdam, Netherlands

NWO

Netherlands Environmental Earth NEESDI System Dynamics Initiative

CONTENTS

Introduction
Perspectives on Environmental Earth System Dynamics
S. Cloetingh 1

Component 1:
The effect of plate stresses and shallow mantle temperatures on tectonics of northwestern Europe
S. Goes, J.J.P. Loohuis, M.J.R. Wortel and R. Govers 23

Component 2:
Modelling the Middle Pleistocene uplift in the Ardennes–Rhenish Massif: thermo-mechanical weakening under the Eifel?
D. Garcia-Castellanos, S. Cloetingh and R. Van Balen 39
The pre-Permian residual gravity field for the Dutch onshore and adjacent offshore
J.B. Dirkzwager, R.A. Stephenson and O.V. Legostaeva 53
Geo-mechanical and rheological modelling of upper crustal faults and their near-surface expression in the Netherlands
J.B. Dirkzwager, J.D. Van Wees, S.A.P.L. Cloetingh, M.C. Geluk, B. Dost and F. Beekman 67

Component 3:
Response of the Rhine–Meuse system (west-central Netherlands) to the last Quaternary glacio-eustatic cycles: a first assessment
T.E. Törnqvist, J. Wallinga, A.S. Murray, H. de Wolf, P. Cleveringa and W. de Gans 89
Sediment budget and tectonic evolution of the Meuse catchment in the Ardennes and the Roer Valley Rift System
R.T. Van Balen, R.F. Houtgast, F.M. Van der Wateren, J. Vandenberghe and P.W. Bogaart 113
Neotectonics of the Roer Valley Rift System, the Netherlands
R.F. Houtgast and R.T. van Balen 131
Numerical modeling of the response of alluvial rivers to Quaternary climate change
P.W. Bogaart and R.T. van Balen 147
Modeling longitudinal-profile development in response to Late Quaternary tectonics, climate and sea-level changes: the River Meuse
L.A. Tebbens, A. Veldkamp, J.J. Van Dijke and J.M. Schoorl 165
Late Quaternary evolution of fluvial sediment composition: a modeling case study of the River Meuse
L.A. Tebbens and A. Veldkamp 187

Component 4:
Land subsidence due to compaction in the coastal area of The Netherlands: the role of lateral fluid flow and constraints from well-log data
H. Kooi 207

Component 5:
The evolution of the Dutch and Belgian coasts and the role of sand supply from the North Sea
J. van der Molen and B. van Dijck 223

Component 6:
Seismic volume attribute analysis of the Cenozoic succession in the L08 block (Southern North Sea)
P. Steeghs, I. Overeem and S. Tigrek 245

Other contributions:
Pleistocene northwards fold propagation of the Jura within the southern Upper Rhine Graben: seismotectonic implications
B. Nivière and T. Winter 263
